.

.

.

.

.

[0] Go to IOS command prompt without saving this config.

[1] Return back to the setup without saving this config.

[2] Save this configuration to nvram and exit.

Enter your selection [2]: 2

Aim: To perform an initial router configuration.

Steps:

→ Add a router and a PC.
→ Connect them using console cable.
→ Open ~~cons~~ terminal in PC
→ It will prompt for initial configuration dialog.
→ Enter 'yes'.
→ Then enter the name of router and press enter.
→ Then you will be prompted ~~for~~ to set up password for EXEC mode.
→ Then ~~you~~ you will be prompted to set up enable password.
→ After that it will be prompted to set-up SNMP Network Management: ~~for~~ type no and press enter. It will be done later manually when devices are connected.
→ After that a list of commands will be shown which will be executed.
→ Type 2 to save the configurations.

Conclusion: The initial router configuration has been performed. The ~~use~~ hostname and password has been setup.
