
C:\ ipconfig

Fast Ethernet 0 Connection

IPv6 Address . . . . . : ::

IPv4 Address . . . . . : 192.168.0.2

Subnet Mask . . . . . : 255.255.255.0

Date

Expt. No. 7 Page No.

Aim: To implement Client Server Netwo-Network

Steps:

→ Add a server from end devices.
→ Add a switch from network devices.
→ Add 3 PCs from end devices.
→ Connect them using copper wire.
→ ~~Goto~~ Double-click server → Config → Fast Ethernet 0
configure the IP address (192.168.0.1)
→ Goto services → DHCP.
Set up start IP address (192.168.0.1)
Set maximum number of users : 512
Tick 'on' to start the service.

→ Goto IP configuration of PCs and select DHCP. IP address will be assigned automatically.

→ To verify Desktop → Command Prompt ~~ipconfig~~
Type ipconfig to see your ip address

Observation:
The end devices got their IP addresses ~~dynamically~~ automatically from the server.
